### CCC – Community Charting Components

## The future of charting in Pentaho

### The future of charting in Pentaho

(but they don't know it yet)

Charts play a very important role in dashboards

Charts play a very important role in dashboards

Indispensable visualization elements

Charts play a very important role in dashboards

Indispensable visualization elements

Charts are cool

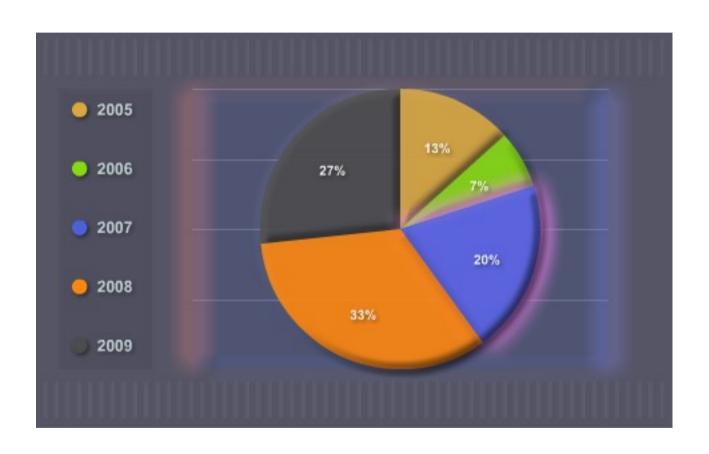

Charts play a very important role in dashboards

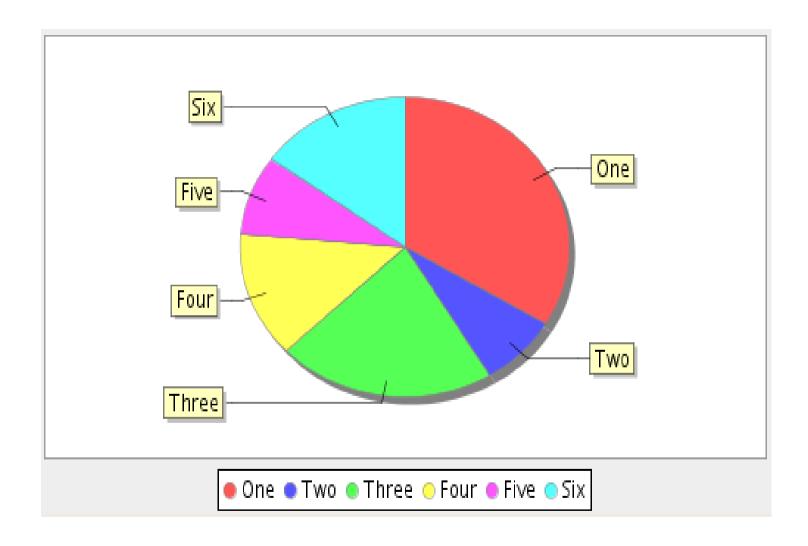

Indispensable visualization elements

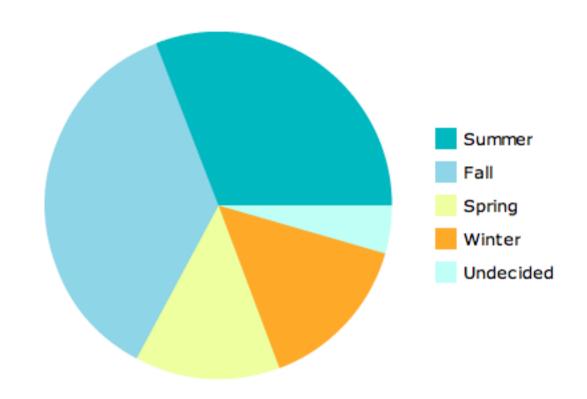

Charts are cool

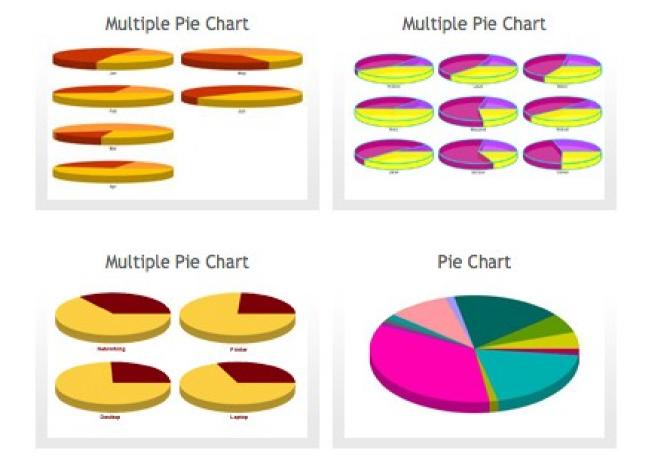

The ones we have suck...

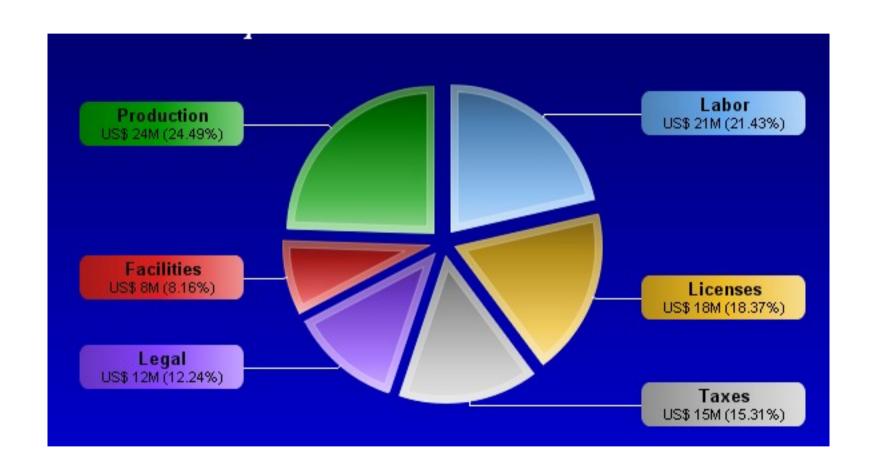

So we started looking for an alternative

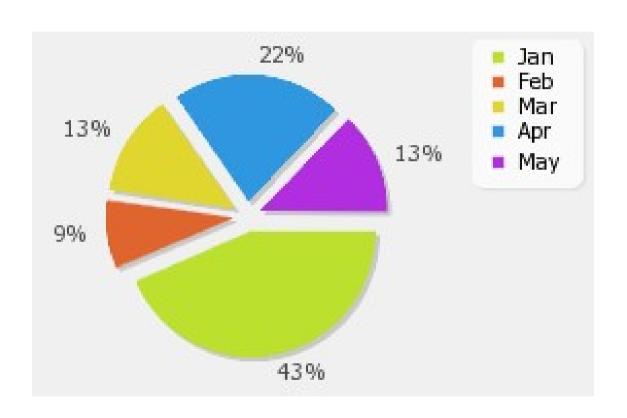

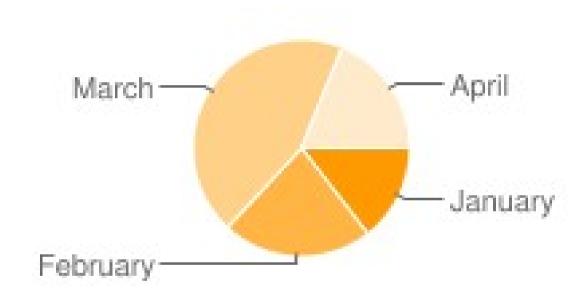

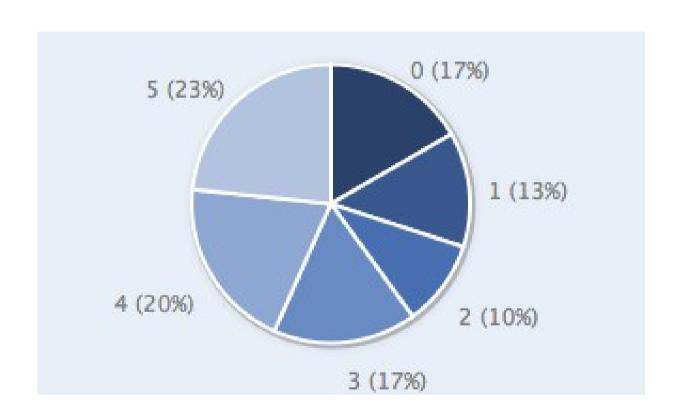

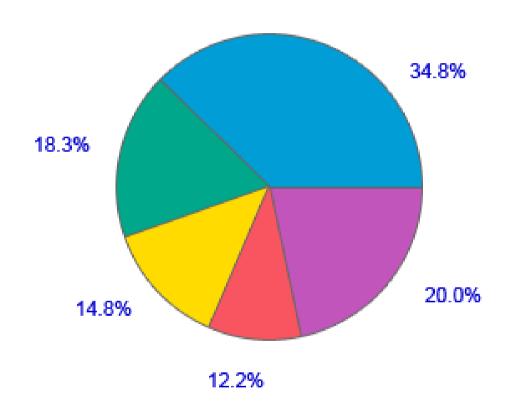

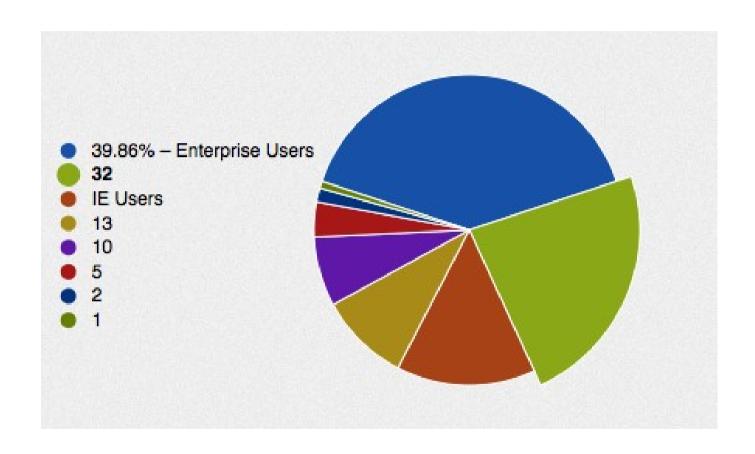

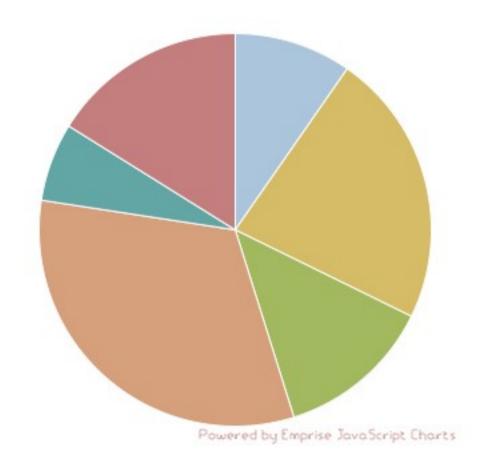

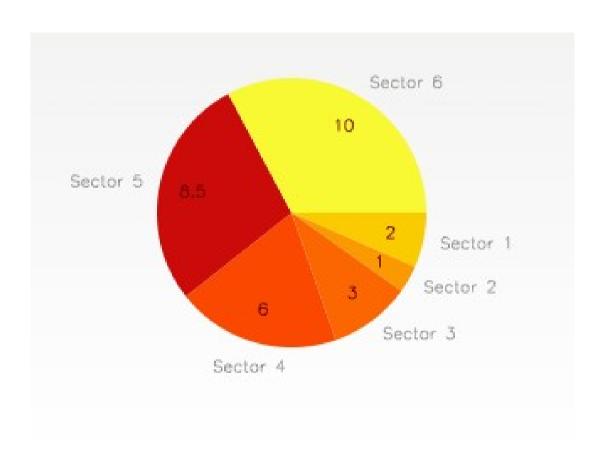

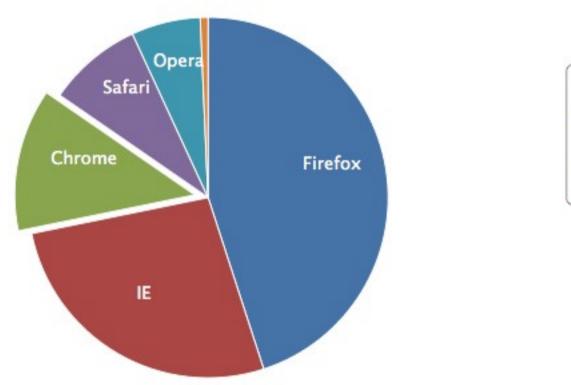

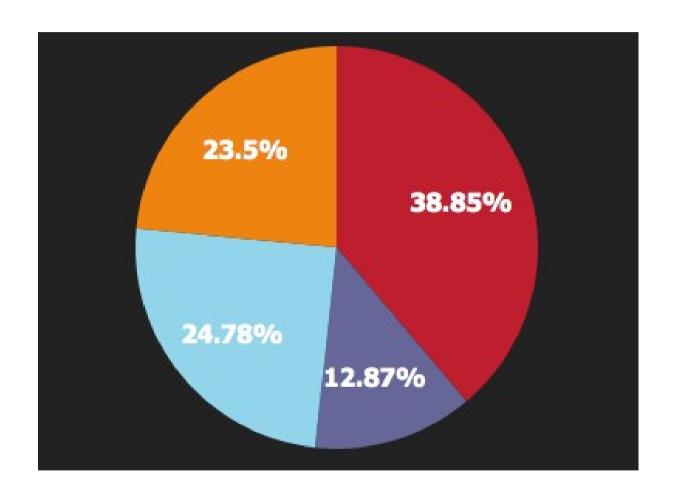

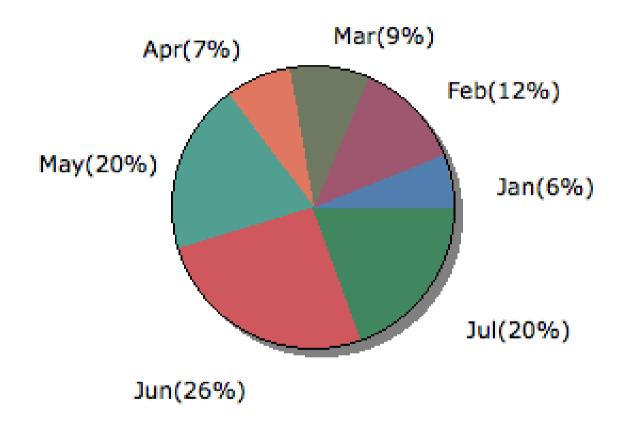

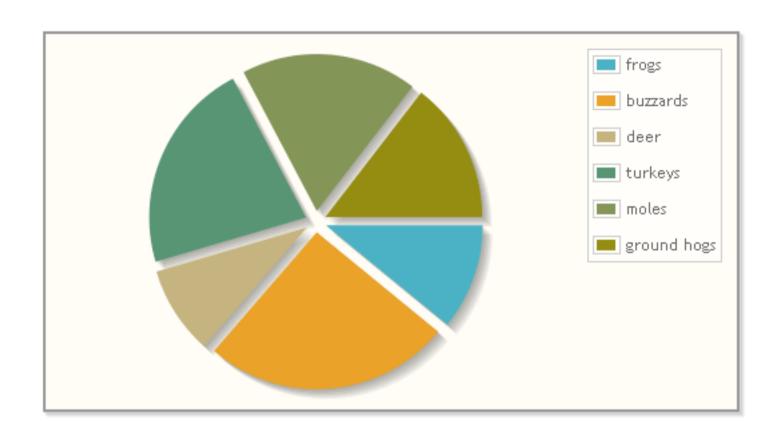

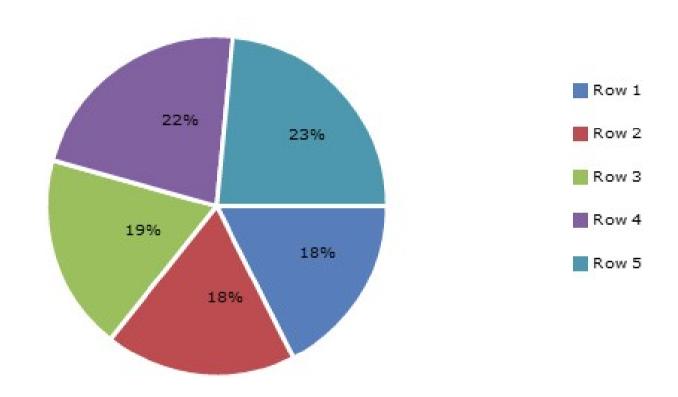

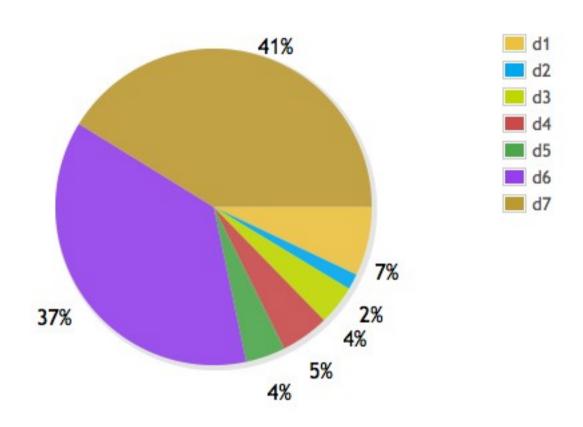

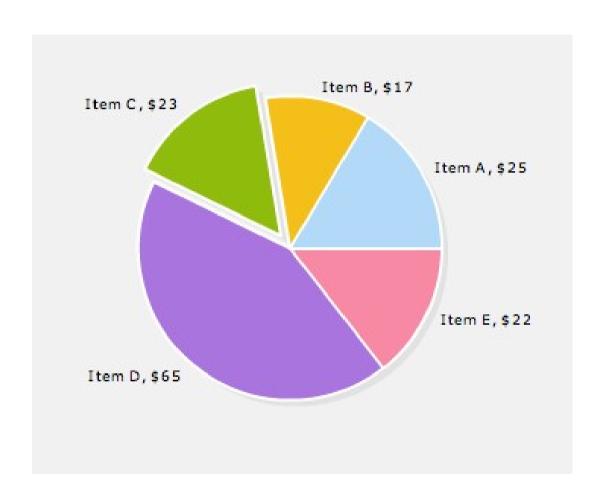

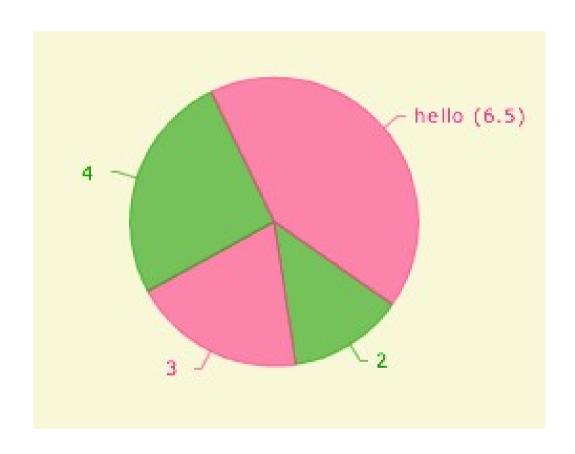

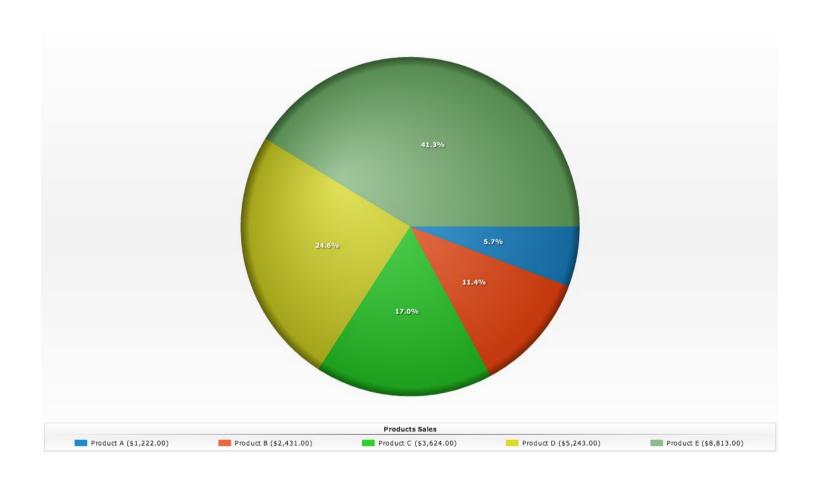

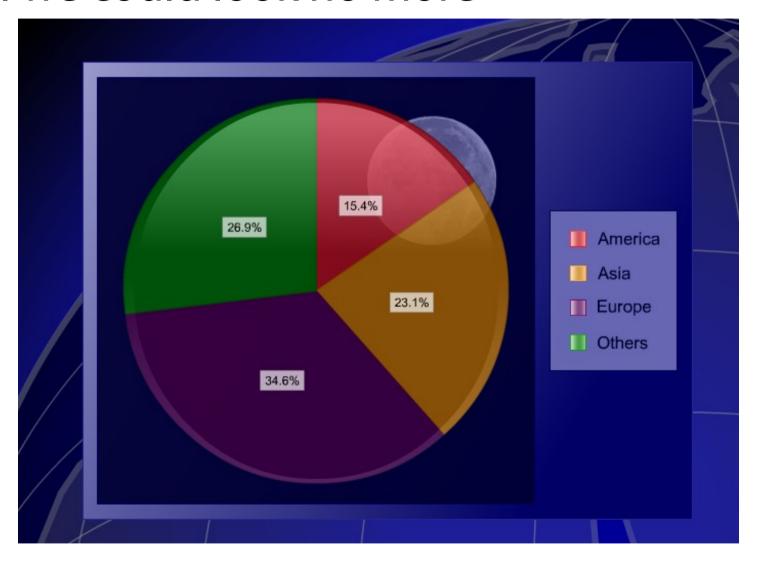

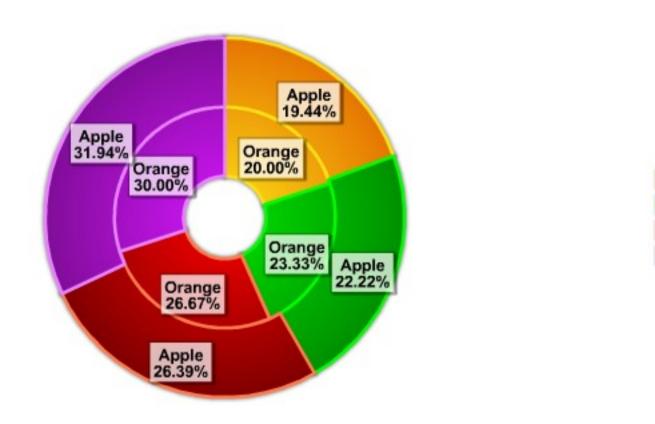

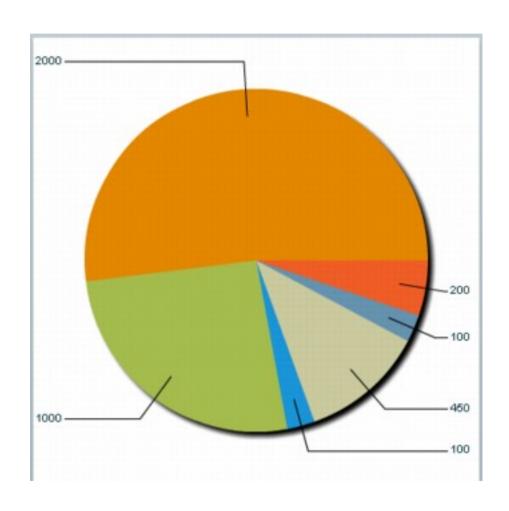

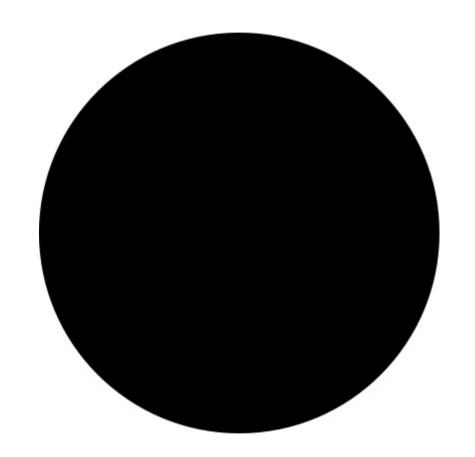

Jan Feb Mar

Apr

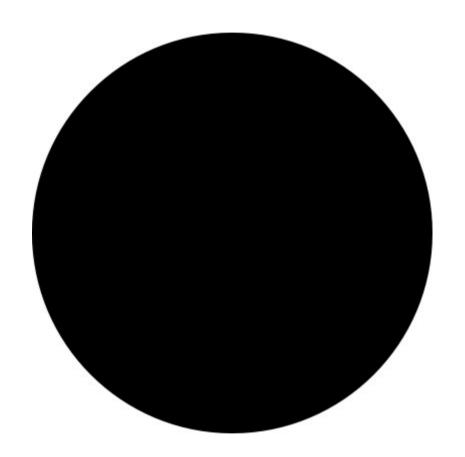

We got to two conclusions

They're all round!

#2

They're all crap!

What now?

# **Chartbeans Project**

Pentaho initiative

# **Chartbeans Project**

Pentaho initiative

Pentaho ChartBeans is a wrapper around existing "chart engines" (such as JFreeChart and Open Flash Chart). Wrapping these chart engines creates a single way of expressing charts.

### Write a java layer

What now?

Look at what our users need

Our users need

Answers!

### Look at what we need

We need

Flexibility!

We don't need a charting library

We don't need a charting library

# We need a visualization library

We don't need a charting library

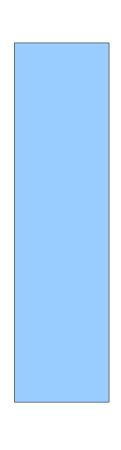

# We need a visualization library

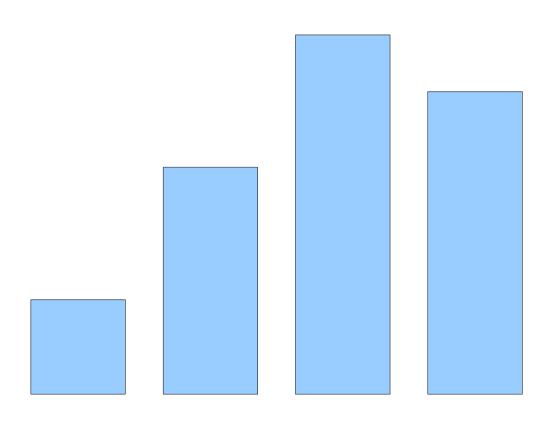

That seamlessly integrates with our tools

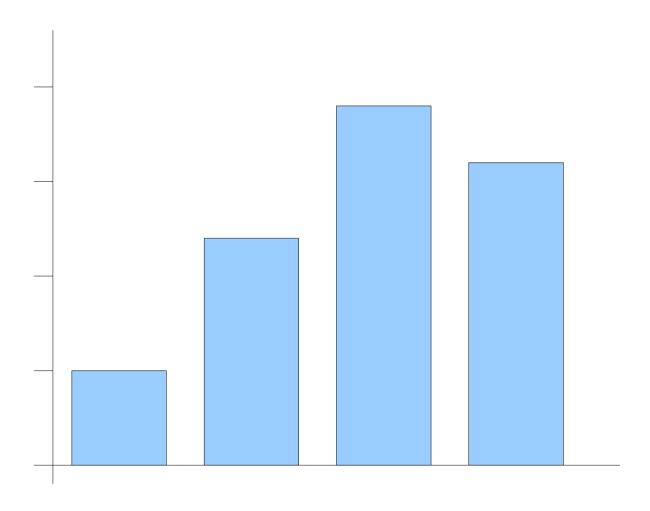

## **Protovis**

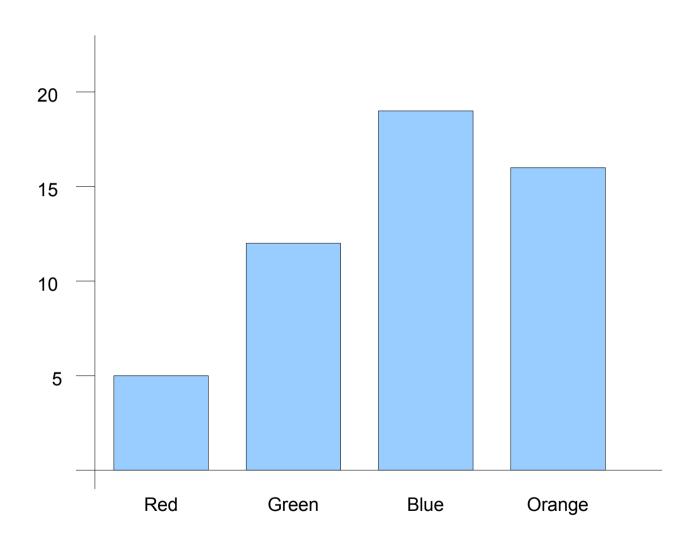

http://vis.stanford.edu/protovis/

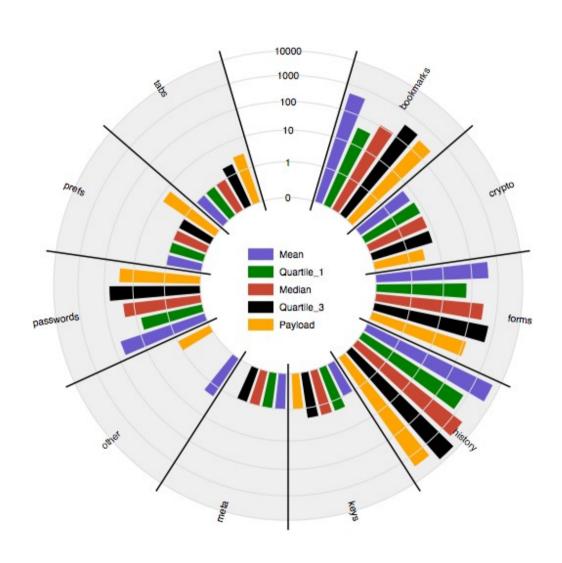

Unlike low-level graphics libraries, Protovis defines marks through dynamic properties that encode data, allowing inheritance, scales and layouts to simplify construction.

Pros:

Cons:

Pros:

We can do whatever we want

Cons:

Pros:

We can do whatever we want

(and we'll never want to do 3d, sorry)

Cons:

Pros:

We can do whatever we want

(and we'll never want to do 3d, sorry)

Cons:

Requires knowledge

Can be time consuming

# The Project

## The Project

## **CCC – Community Charting Components**

http://github.com/pmalves/ccc

## **CCC – Community Charting Components**

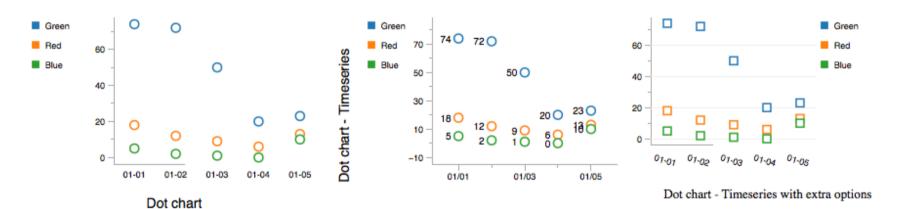

CCC is a charting library on top of protovis with the aim to provide developers with a way to include the basic chart types into a dashboard without losing the main principle: **Extensibility** 

# **CCC – Community Charting Components**

**Demonstration**
